Data Science | Business Intelligence | Process Management

Academic Experience

• MBA: Supply Chain Logistics	Fundação Dom Cabral	2022
• Chemical Engineering	UFV	2017
• International Exchange: Chemical Engineering	Florida State University and Johns Hopkins	2014

Courses and Certificates

• Generative AI Engineer Associate (Link)	Databricks	2026
• Nanodegree: Agentic AI	Bertelsmann Scholarship Program	2026
• Attention Mechanism and Transformers	Coursera	2026
• Building Machine Learning Systems	ML School	2024
• Using agile methodologies	LinkedIn Learning	2023
• Corporate Results presentation	Minimiza	2021
• Microsoft Power BI for Data Science	Data Science Academy	2020
• Contemporary Leadership Challenges	Florida State University	2014
• Business Communications	Florida State University	2014

Professional Experience

Afya **04/2025 - 04/2026**

Data Scientist & ML Engineer | Educational Sector **04/2025 – 04/2026**

Main Objective: Develop and deploy machine learning and generative AI solutions

Direct Report: Data Manager

I worked at the intersection of technical development and product management in AI solutions, leading the identification of strategic opportunities and translating business needs into ML and GenAI products.

Product & Stakeholder Management:

- Led discovery with stakeholders to map critical business problems and prioritize high-impact use cases, including customer support automation (ticket backlog reduction using LLMs) and intelligent academic tutoring.
- Led an end-to-end automated tutoring project, including roadmap definition, feature prioritization, milestone setting, and coordination across technical and product teams.

Technical Expertise in AI/ML:

- Developed and deployed conversational agents using LangChain, with hands-on experience in LLM architectures and orchestration frameworks.
- Designed a production-ready ML pipeline using XGBoost and MLflow for student churn prediction, including the development of custom wrappers to ensure reproducibility, model versioning, and scalable deployment.

Ambev | Anheuser-Busch Inbev Brazil

03/2017 - 11/2024

Head of Analytics and Data & Process Automation | Payments

12/2023 – 11/2024

Main Objective: Development of the Payment Department's Data Infrastructure

Direct Report: Logistics and Procurement Director

Leadership: 3 Specialists and 30+ Analysts

Budget: BRL 5.5 Billion

Led the digital transformation of the department, migrating from Excel spreadsheets to BI dashboards and databases, and training LLM models for document identification and classification.

Main projects:

- Structured the ETL pipeline connecting data lake, SAP and government document data
- Automated pending payment analysis using Python with visualization in Power BI
- Developed dashboards for document mass balance and status tracking

Key results:

- Reduced data update and OKR reporting cycle from 30 days to 24 hours, directly impacting operational efficiency
- Decreased pending documents by 60%, totaling over BRL 60 million
- Recovered BRL 35 million from incorrect payments (cancelled or duplicated)

BI and Cost Efficiency Manager in Logistics

12/2022 – 11/2023

Main Objective: Identify cost optimization opportunities in the logistics chain

Direct Report: National Tactical Transport Manager

Leadership: 1 Specialist and 1 Analyst

Budget: BRL 2 Billion

Main projects:

- Developed a BI tool for cost vs. budget comparison with multi-threaded data pipelines and Power BI output
- Automated the Annual Budget Planning process, including validation workflows
- Performed cost trend analysis and forecasting using regression algorithms and clustering techniques
- Conducted supply chain allocation audits using graph manipulation packages in Python
- Modeled cost impact factors through partial differential equations

Key results:

- Achieved over BRL 50 million in 1st Tier logistics cost savings
- Improved cost impact indicators by 33%

International Manager of Digital Products and Logistics Services

04/2021 – 12/2022

Main Objective: Optimize ABI's transportation network in South Africa and commercialize digital products and services

Direct Report: New Ventures Manager

Leadership: 3 Specialists and 2 Analysts

Budget: BRL 1.5 Million

Led the optimization of ABI's transportation network in South Africa through the implementation and execution of a Transportation Management System (TMS). Acted as Product Manager for digital products related to production scheduling, routing, and Warehouse Management Systems (WMS)

Main projects:

- Redesigned transportation processes and optimization algorithms
- Provided consulting for the planning and execution of ABI South Africa's transportation timeline
- Developed a machine learning algorithm to identify low picking productivity

Key results:

- Reduced daily optimization cycles from 5 to 1
- Decreased the number of analysts required for optimization, generating annual savings of over BRL 1.2 million
- Improved the Optimization Plan Adherence KPI from -40% to +60%, sparking a NPS score of 100
